HOT TOPICS IN RENAL CELL CARCINOMA:

what we know and looking to the future

Renal cell carcinoma is a highly heterogeneous and evolving disease that continues to pose significant diagnostic and therapeutic challenges.

Advances in imaging and pathology are refining tumor characterization, while innovations in surgery, ablative approaches, radiotherapy, and systemic treatments are reshaping clinical practice across both localized and advanced settings.

This congress aims to offer a comprehensive and up-to-date overview of these developments, combining evidence-based insights with expert perspectives and real-world experience. By addressing key controversies, highlighting emerging data, and exploring future directions, the meeting seeks to support clinicians in optimizing decision-making and delivering increasingly personalized and effective care for patients with renal cell carcinoma.

Program

- 08:30** Welcome of the Authorities
Massimo Aglietta, Mario Airoidi, Alessandro Comandone
- 08:45** Welcome and introduction to the congress
Marco Oderda, Sara Elena Rebuzzi

IMAGING AND PATHOLOGY

Chairs: Davide Bimbatti, Isabella Castellano, Serena Grimaldi

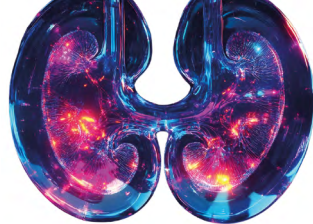

- 09:00** Novel imaging (PET) **Alessio Rizzo**
- 09:10** Anatomopathological classification **Chiara Pitino**
- 09:20** Translational characterization and biomarkers **Pasquale Rescigno**
- 09:30** Discussion

LOCALIZED RCC – SURGERY

Chairs: Marco Allasia, Davide Bimbatti, Paolo Gontero, Alessandro Volpe
